

Drone footage shows scale of destruction in Papua New Guinea landslide

People can be seen pacing back and forth searching for their loved ones in the shadow of the limestone mountainside.

A mass of boulders, earth and splintered trees can be seen in new drone footage released Tuesday of the devastation from a landslide that wiped out a village in a remote part of Papua New Guinea.

People can be seen pacing back and forth searching for their loved ones in the shadow of the limestone mountainside, part of which sheared away Friday, devastating the village of Yambali in the South Pacific nation's remote highlands.

As they used shovels, sticks and their bare hands in the footage released by the United Nations Development Programme (UNDP), the hope of finding their loved ones alive in the tons of rubble becomes increasingly unlikely.
